An introduction to **PERMACULTURE**

As the pressures of global climate change weigh heavily, food security and community resilience continue to be threatened. One solution stands out among the rest.

Permaculture is a set of design principles centered on whole systems thinking. It simulates patterns observed in natural ecosystems. It integrates regenerative agriculture, landscaping, rainwater management, and nutrient cycling in ways that can be applied to residential or commercial landscapes, homesteads, farms, and city planning. It can be our thriving food future, so be part of the movement & let's make it happen!

Please join Patrick Padden, Michael Alcazar
& the NoCo Permaculture Guild at
Avogadro's Number
January 26 / 12:30–2pm
